7. Quick Reference 5

1. Your Role

As company admin you run the **management company** on Portier369: people, settings, and oversight across every association. Managers run daily operations; you set them up, watch performance, and step in with the executive views. You sign in at **portier369.com** using the **Company admin** entry point on the login page (also linked in the site footer).

2. First-Week Setup Checklist

1. **Company settings** (Settings): company name, logo/branding, and — important — the **Support Email** and phone. These appear on every owner's dashboard contact card and are the final fallback for owner messages.
2. **Invite your managers** (Settings → Invite a staff member): enter their email and role; they receive an invitation link to set their password. Pending invitations are listed with expiry dates.
3. **Create associations** and import their data (owners, units, opening balances) via CSV import — or have managers do it.
4. **Assign a Site Manager on every association** (association → Profile tab). This determines which manager receives owner-portal messages. Unassigned associations route messages to YOU.
5. **Payment instructions per association** (same Profile tab): what owners see on How to Pay. For online payments, complete Stripe onboarding on the association's Payments tab — each association connects its own Stripe account and funds settle to its own bank.
6. **Invite owners and board members**: owners are invited from their owner record (portal activation is tracked under Owner Portal Activation); mark board members as such so they receive the board portal.
7. **Set the AI key** (Settings → AI) to switch on AI features platform-wide: violation letters, communications copilot, and the role assistants.

The one setting people forget

Site Manager on each association. It is the difference between owner messages landing with the right manager versus piling into your own inbox.

3. People & Access

- **Roles**: Company Admin → Manager → Board / Owner → Vendor. Every account is invitation-based; there is no public sign-up.
- **Managers** page — each manager's workload and portfolio.

- **Password resets** — anyone can self-serve via Forgot password on the login page; you can also issue a temporary password from Settings for any staff member.
- **Vendors** — invite vendors so they get their own portal: assignments, schedule, status updates from the field, and payment visibility. No more phone tag.

4. The Executive Suite

Your sidebar is a command deck across the whole company:

Page	What it answers
Overview	Executive dashboard: doors, owners, emergencies, collections, per-property health scores
AI Command Center	Rule-based insights: what needs attention now, trends, expiring contracts
Performance	Manager rankings: resolution speed, closed volume, inspection completion
Portfolio Health	Health scores across every association
Financials	Company-wide income/expense, A/R, delinquencies, budget vs actual
Command Center	Payment operations: collections today, pending ACH, reconciliation, exceptions
Compliance	Vendor COIs/licenses expiring, W-9 gaps, statutory inspections due
Work Orders / Violations / ARC	Company-wide oversight of operations
Billing & Doors / Revenue	Your Portier369 subscription usage and management-fee revenue
Communications	Everything sent, company-wide
Audit Logs	Who did what, when

5. How Owner Messages Flow (and Where You Fit)

Owners message from their portal; the assigned manager gets it as a **regular email with Reply-To set to the owner**. You are the fallback: if an association has no Site Manager assigned, those messages come to the company admins. Watch the **Communications** page for volume and gaps — a spike from one association usually means something needs attention there.

6. Financial Guardrails

- Money is double-entry throughout; every owner payment, charge, and vendor bill posts to journals — auditable under Audit Logs and reportable under Financials.
- Online payments use **per-association Stripe accounts**: each association's dues settle directly to its own bank account. Company funds and association trust funds are never commingled.
- Bank accounts carry fund types (operating / reserve / special assessment...); cross-fund transfers require explicit authorization.

7. Quick Reference

I need to...	Go to
Add a new manager	Settings → Invite a staff member
Reset someone's password	Settings (temporary password) or have them use Forgot password
Set the support email owners see	Settings → Support Email
Route owner messages to the right manager	Association → Profile → Site Manager
See which manager is falling behind	Performance
Check company-wide cash position	Financials / Command Center
Verify vendor insurance is current	Compliance
See everything sent to owners	Communications
Review a staff action	Audit Logs
Turn on AI features	Settings → AI
