1. Getting Started

Signing in

1. Go to **portier369.com** and click **Sign in** (top right).
2. Enter your work email and password. Staff accounts are invitation-based — your company admin creates your account and the platform emails you a link to set your password.
3. Forgot your password? Click **Forgot password?** on the login page; a reset link is emailed to you. Your company admin can also issue a temporary password from Settings.

The workspace

Everything lives in the left sidebar. The right-hand **Tasks rail** shows quick actions and context for the page you are on. On a phone, the sidebar collapses behind the menu button — the entire platform is mobile-friendly, and owners can install it on their home screen like an app.

White-glove principle

Owners and board members should never need to learn the system to reach you. They tap one button; you get a normal email. Your job in Portier369 is to keep the data current so their portals answer questions before they have to ask.

2. Your Day

- **Dashboard** — your morning screen: open work orders, violations, delinquencies, and what needs attention today.
- **Reminders** — due and upcoming items across every association you manage.
- **Calendar** — meetings, vendor visits, and maintenance events in one view.
- **AI Assistant** — ask questions in plain English ("who is delinquent at Granville?"). It answers from live portfolio data.

3. Associations

Set up each association correctly (one-time, 10 minutes)

Open **Associations** → **Directory**, pick the association, then the **Profile** tab. Three things on this tab drive the owner experience:

1. **Assigned manager (Site Manager)**. Select yourself (or the responsible manager). This is where owner-portal messages for this association are delivered. If left unassigned, messages fall back to the company admins.

2. **Payment instructions.** "Make checks payable to", the remittance address, and any bill-pay notes. This text is exactly what owners see on their How to Pay page — keep it accurate.
3. **Online payments (optional).** On the Payments tab, connect the association's own Stripe account so owners can pay online; funds settle directly to the association's bank account.

Units, parking, and data import

- Manage units and parking under **Associations** → **Units / Parking**.
- Onboarding a new association? **Associations** → **Import data (CSV)** imports owners, units, and opening balances in one pass.

4. Owner Messages & Communication

How owner messages reach you

When an owner taps **Send a message** in their portal, you receive a **normal email** in your regular inbox. The subject is prefixed **[Owner message]**, the sender is identified with their unit ("Liam Landlord (Unit 102)"), and **Reply-To is the owner's email address** — just hit Reply in Outlook or Gmail. There is no separate inbox to monitor.

Routing rule

Messages go to the association's Assigned Manager (Profile tab). No manager assigned → they go to the company admins → then the company support email. Every inbound message is also recorded in the communications log.

Outbound communication

- **Communication** → **Center** — announcements and blasts to owners, with delivery history.
- **Communication** → **Send email / Letters** — one-off email or generated letters (AI-assisted drafting available).
- **Communication** → **SMS** — SMS is recorded today; live text delivery activates when the company connects a texting number.

5. Work Orders

Track every job under **Maintenance** → **Work Orders**. Statuses flow: **new** → **assigned** → **scheduled** → **in progress** → **done/completed** → **billed** → **closed**. Priorities: low, normal, high, emergency.

1. **Create:** New work order → pick association (and unit if owner-specific) → describe the issue — or convert an owner's portal request.

2. **Assign:** pick the vendor; they see it instantly in their own vendor portal and update status from the field.
3. **Schedule:** set the date; it appears on your calendar, the vendor's schedule, and the owner's portal.
4. **Close:** mark done, attach the vendor bill under Payables, and the owner sees the resolution in their portal.

Emergencies

Anything marked Emergency surfaces on your dashboard, the board dashboard, and the vendor's alert banner. Use it only for true emergencies (active leak, no heat, life-safety).

6. Violations

The full lifecycle is automated under **Violations**:

1. Record the violation with photos (from your phone, on-site).
2. Generate the notice letter from a template (AI drafting available) and send it — it is logged automatically.
3. Schedule a hearing if it escalates; owners see hearing details in their portal.
4. Assess fines where authorized; they post to the owner's ledger.

7. Architectural Reviews

Owners submit ARC requests from their portal. Your queue is **Architectural Reviews** in the sidebar: approve, deny, or request more information — each request has a built-in message thread with the owner, so the whole conversation stays attached to the request. Board members see the same queue read-only in their portal.

8. Preventive Maintenance, Inspections & Inventory

- **Maintenance** → **Preventive** — recurring and seasonal tasks (fire alarm inspections, boiler service) with automated reminders before deadlines.
- **Maintenance** → **Inventory** — track association-owned equipment and supplies.
- **Lock Boxes** — key and lockbox custody per association.

9. Money: What Managers Touch

Full accounting (journal entries, GL, budgets) is double-entry under **Accounting**. Day-to-day, managers mostly use:

- **Receivables** — owner charges and balances; record checks received.
- **Payables** — vendor bills tied to work orders; approval → payment pipeline.
- **Command Center** — live collections, deposits, reconciliation status, and exceptions once online payments are active.
- **Budget vs Actuals** — per-association performance; the board sees a scoped version of the same numbers.

10. Meetings, Board & Documents

- **Meetings** — schedule board/annual meetings with agendas; they appear on board and owner calendars.
- **Board Approvals** — send items for board vote; members vote digitally from their portal.
- **Documents** — the association file cabinet. **Generate** creates letters/notices from templates; everything is shared to the right portals automatically.

11. Reports

- **Reports** — the standard library (delinquency, A/R aging, violations, work orders, financials).
- **Report Builder** — build and save your own.
- **Metrics** — portfolio KPIs at a glance.

12. Quick Reference

I need to...	Go to
See what needs attention today	Dashboard
Answer an owner's message	Your email inbox (just hit Reply)
Assign who gets owner messages	Association → Profile → Site Manager
Change what owners see on How to Pay	Association → Profile → Payment Instructions
Turn on online payments	Association → Payments tab (Stripe onboarding)
Log a violation with photos	Violations → New

Dispatch a plumber	Maintenance → Work Orders → assign vendor
Approve an owner's ARC request	Architectural Reviews
Send an announcement to all owners	Communication → Center
Give the board something to vote on	Association → Approvals
Import a new association's data	Associations → Import data (CSV)
Invite portal access for an owner	People → owner record → invite / Owner Portal Activation
Ask anything about your portfolio	AI Assistant
